STATUS OF CHILDHOOD IMMUNIZATION IN NEBRASKA

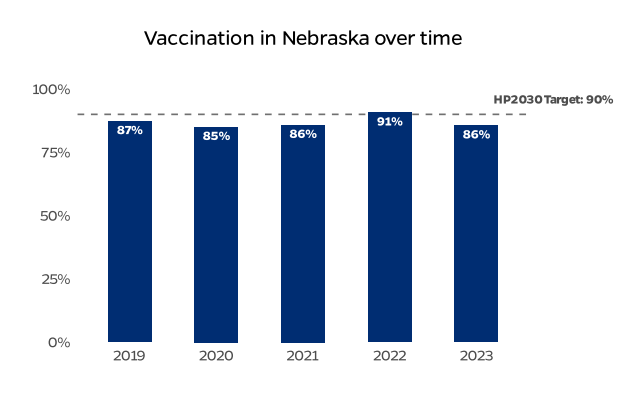
This brief illustrates the current status of childhood immunization in Nebraska and is intended to inform state-level policy decisions and priorities. Takeaways include:

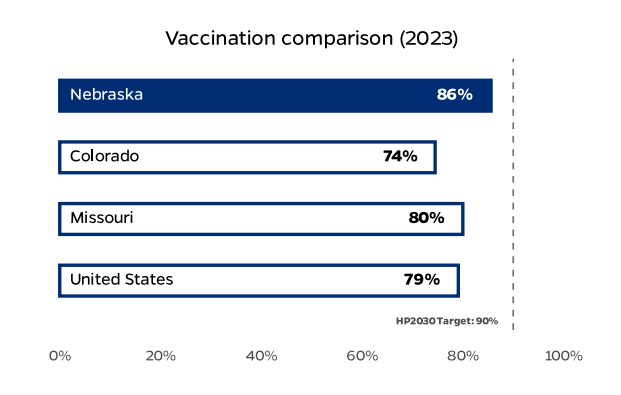
- State-level immunization coverage in Nebraska for MMR vaccination is above national levels.
- Nebraska's non-medical exemption rate among kindergartners is lower than the U.S. median.
- State-level per capita public health spending is lower than the national rate.
- Nebraska has reported 1 case of measles since January 1, 2025.

VACCINATION COVERAGE

Maintaining sufficient vaccination coverage is critical for establishing community protection. The charts below demonstrate how coverage for two critical vaccines has changed over time in Nebraska and how it compares to neighboring states, national rates, and Healthy People 2030 (HP2030) targets.

Proportion of 2-year-olds fully protected with DTaP vaccines





In 2023, fewer 2-year-olds were fully vaccinated against diphtheria, tetanus, and pertussis (received all four doses of DTaP) in Nebraska compared to the previous year. Coverage in Nebraska is below the HP2030 target of 90%.

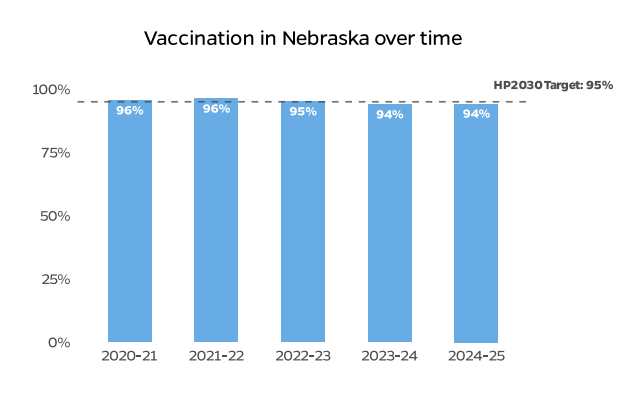
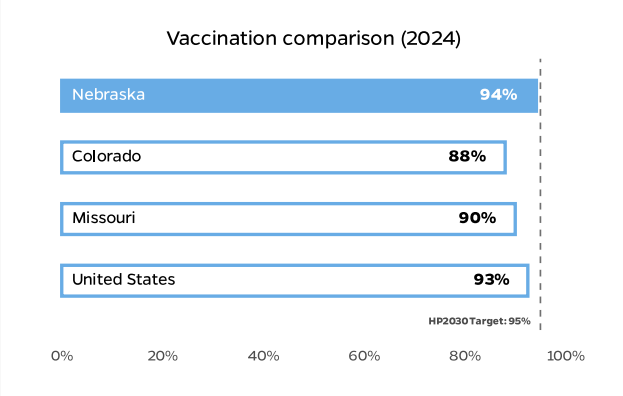
Proportion of kindergartners protected with MMR vaccines





In 2024, approximately the same proportion of kindergarteners completed the measles, mumps, and rubella (MMR) vaccine series in Nebraska compared to the previous year. Coverage in Nebraska falls short of the HP2030 target of 95%.

VACCINATION EXEMPTIONS

Many states allow children attending public school to receive vaccination exemptions for religious reasons or for personal reasons, sometimes referred to as “philosophical exemptions.” Higher rates of non-medical exemptions have been linked with increased disease transmission.

Allows personal exemptions?	Allows religious exemptions?	Non-medical exemptions — state	Non-medical exemptions — US median
NO	YES	3.5%	4%

Nebraska's rate of non-medical exemptions among kindergartners during the 2024-25 school year is a slight increase from the state's 2023-24 rate.

PUBLIC HEALTH SPENDING

Low levels of public health spending are thought to contribute to suboptimal immunization rates. Nationally, Nebraska ranks 30th in public health spending.

State dollars dedicated to public health per capita (2022-23)

UNIVERSAL VACCINE PURCHASING

In states with Universal Purchase programs, the state government purchases all recommended vaccines for all children, regardless of insurance status. These initiatives can help to address disparities in vaccine coverage and support equitable vaccine access.

Universal Purchaser?
NO

SUPPORT FOR IMMUNIZATION

Strong policy commitment to immunization is critical for effective vaccination programs. The state legislature has recently introduced several bills that would affect state-wide childhood vaccination, a selection of which are described below. The arrows below indicate whether these bills would strengthen (↑) or weaken (↓) vaccine safety nets.

- ↑ NE LB 202 (Not enacted) – Would allow pharmacy technicians to administer vaccines
- ↓ NE LB 374 (Not enacted) – Would establish a "parental bill of rights," including reinforcing parents' ability to opt out of school immunization (e.g., via religious exemptions)
- ↓ NE LB 1028 (Not enacted) – Would require that local and county health departments receive state-level approval for vaccination efforts

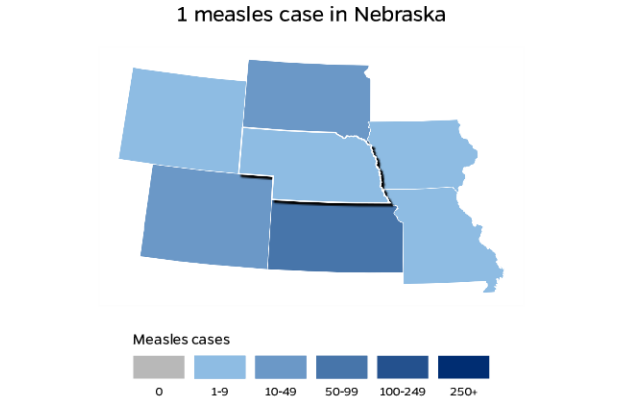
DISEASE STATUS

Measles outbreaks can indicate insufficient vaccination coverage within a population. Disease may spread across state borders when vaccine coverage is low. The map below visualizes the number of measles cases reported in Nebraska and neighboring states between January 1, 2025 and September 15, 2025.



Source: U.S. Measles Tracker, IVAC.

Vaccines can help prevent expensive disease outbreaks. A 2018–19 measles outbreak in Washington was estimated to cost US$47,479 per case for both direct medical and public health response expenses.
